

TESTIMONIAL

Institute of Technical Education (ITE) College Central

10 June 2026

To Whom It May Concern,

It is my pleasure to provide this testimonial in support of Ms Bernice Toh Jiayi, a student enrolled in the AI Applications course at ITE College Central. Throughout her programme, she has developed a solid foundation across the core disciplines of artificial intelligence, including Machine Learning, Natural Language Processing, Computer Vision, and AI Ethics. She has consistently approached her learning with initiative and a genuine willingness to acquire new knowledge and skills.

These qualities were evident during her group capstone project, in which she developed a weapon detection model using YOLO and computer vision techniques to identify potential threats in public spaces. The work demonstrated both her technical competence and her ability to apply theory to a practical problem. Bernice has also proven to be a dependable team member. She contributed her fair share to the group's collective effort and worked collaboratively to bring the project to fruition.

Bernice further distinguished herself during her internship at the National Healthcare Group (NHG), where she contributed to the development of various AI-powered bots designed to support the department. Her ability to apply her skills in a professional setting, and to deliver solutions of practical value, speaks well of her technical capability.

I am confident that Bernice will continue to grow and excel in her future endeavours. It is therefore I recommend her without reservation, and I trust she will be a worthy candidate for admission to your institution.

Yours faithfully,

Estebelle Khong (Ms)
Senior Lecturer (AI Applications)
School of Electronics & Info-Comm Technology
ITE College Central
