To Whom It May Concern

Bernice Toh Jiayi joined our department for a 9-month internship from 6 October 2025 to 15 May 2026. When Bernice first joined, she had no prior experience in the technical domains we assigned her. Despite this, she proved to be a fast learner, picking up new concepts quickly and consistently approaching her tasks with an enthusiastic attitude. Through her dedication and eagerness to learn, she steadily built the necessary skills and went on to deliver her assignments to a high standard.

Bernice designed and refined three chatbots to focus on synthesising large amounts of information into clear, actionable insights. Across all three chatbots, she demonstrated a positive attitude, continuously improving performance through multiple testing and iterations.

Bernice also designed and implemented an end-to-end staff onboarding and offboarding workflow using Plumber, a workflow automation tool developed by Open Government Products, enhancing the existing process into a fully automated solution. Her improvements increased operational efficiency, minimised errors and improved the overall user experience. She demonstrated strong technical competence and reliably completed tasks with minimal supervision, maintaining a high standard of professionalism and teamwork throughout.

One of her standout contributions was her involvement in the development of MATAbot using Pair Assistant, an AI tool developed by Open Government Products, from initial development through User Acceptance Testing to go live. Throughout this project, she demonstrated strong adaptability in handling unfamiliar tasks, as well as effective time management in meeting deadlines and balancing multiple priorities.

Bernice's creative talents were equally notable. She was part of the social media team, taking photos and videos onsite for SHBC's Instagram account across key event segments. She also helped produce the event highlight reels and covered the Grand Draw segment, keying in close to 200 winners' names for Instagram Stories within a tight turnaround time.

Beyond her technical contributions, Bernice also contributed to event operations. She served as a facilitator at booths, workshops and orientation session. She demonstrated a strong sense of responsibility and worked well as part of a team to support smooth event operations. meaningfully

Bernice's internship performance demonstrated a consistently positive attitude, strong adaptability and fast learning ability. She collaborated well with team members and upheld a high standard of professionalism in applying her technical expertise. Bernice has shown great potential and I am confident she will continue to excel in future roles.

Sincerely,
